The Bock water heater has a Carlin EZ-H-5L burner mounted on it, which was premiered at the AREE show this year.

## RCI FUEL PURIFIER

The RCI Technologies purifier is a simple one step unit that removes 100 percent of the free water and 95 to 98 percent of dust, dirt, and other normal and natural contaminants found in all diesel fuel. Even today's "clean" diesel fuel will easily become contaminated during transportation and storage. Unlike all other products on the market, the RCI Technologies purifier performs this function without the use of a replaceable, changeable, or cleanable filter element, cartridge, or bowl. The system uses a three-stage purification process using two well-known fuel separation principles, centrifugal and coalescence. By removing contamination immediately before the fuel enters the engine's filter system, the purifier delivers cleaner fuel, (virtually eliminating filter clogging) and therefore greatly extending maintenance intervals. A perfect solution for customers' stationary generator applications.

## GRANBY STEEL TANKS' GREENSHIELD LINE

Granby Steel Tanks is proud to introduce its Greenshield line of storage tanks. The Greenshield line should be your logical and responsible choice when replacing your customer's tank or installing on-site storage in new construction. Available with the ECOGUARD double bottom, leak detection system or the PRO-TECH 20 polyurethane external coating, the Greenshield tanks are 100 percent safe, environmentally friendly, and guaranteed durable. As always, Granby stands behind its tanks and the Greenshield line

offers warranties up to 25 years with up to two million dollars of liability coverage.

## TANKEASY PROGRAM

The next generation of oil tank warranty, gives you a managed program that will last. The TankEasy program is the ideal merging of safety and security for fuel oil dealers, homeowners, insurance companies, and the oil industry as a whole. The keystone of the TankEasy program is the yearly monitoring of underground storage tanks and inspection of above ground storage tanks. The yearly sampling of soil under the tank for early detection of leaks is paramount in the elimination of a "big spill." The TankEasy program also provides \$100,000 in clean up money should a tank leak. TankEasy will allow approved fuel oil dealers to clean up spills. An additional benefit of the TankEasy program is a provision for a tank replacement even if there is no leak. TankEasy is supported by a full team of certified environmental consultants that will provide assistance if a problem should arise.
